4pm 2 March 2001

INTERCONNECTOR GAS FLOW INFORMATION

From today (Friday) Interconnector will publish on its website daily records of physical gas flows, in or out of the UK. The information will be posted on the day following the actual physical flow. Monthly flow data for January and February are published with this media release but will not be shown in this format after today. This is the first time that this data has been made available in this timeframe to anyone including Interconnector Shippers.

A spokesman for Interconnector said: " We are very pleased that all parties have agreed to the release of this information which we hope will fulfil the demand for increased knowledge concerning flows in the pipe. As far as we are aware Interconnector is the first European pipeline system to publish such data in such a rapid timeframe. However it must be recognised that the numbers may be subject to minor changes following the full allocation process."

Interconnector (UK) Limited

Interconnector (UK) Ltd, or IUK, operates a sub-sea gas pipeline and terminal facilities connecting the UK and continental Europe. The company's 40" diameter carbon steel pipeline stretches 230 kilometres between Bacton in north Norfolk and Zeebrugge in Belgium. It is capable of transporting 20 billion cubic metres of gas a year (bcm/yr) from Bacton to Zeebrugge and 8.5 bcm/yr in the opposite direction. Owned by ten major energy companies, IUK has sold capacity in the pipeline to gas shippers. A dedicated and award-winning IT system, ISIS, manages the volumes and flows and provides constantly updated information to IUK and its shippers. Further information on IUK can be obtained from <http://www.iuk-isis.com>
