---

**7<sup>th</sup> October 2003**

## **WATER DEWPOINT UPDATE**

In response to a continuing but declining deposition of dust at the filters within the Zeebrugge terminal following the recent pigging operation, Interconnector continues to manage flows in the pipeline back towards full operational levels. Current flows are at approximately 50% of capacity.

## **INTERCONNECTOR (UK) LIMITED – BACKGROUND**

Interconnector (UK) Ltd (“IUK”) operates a sub-sea pipeline and terminal facilities connecting the UK and continental Europe. The company’s 40” diameter pipeline stretches 230 kilometres between Bacton in north Norfolk and Zeebrugge in Belgium. It is presently capable of transporting 20 billion cubic metres a year (bcm/yr) from Bacton to Zeebrugge and 8.5 bcm/yr in the opposite direction.

Owned by ten major companies IUK has sold capacity in the pipeline to numerous gas shippers. A dedicated and award winning IT system, ISIS, manages the volumes and flows and provides constantly updated information to IUK and its customers.

Further information on IUK can be obtained from [www.interconnector.com](http://www.interconnector.com)
