## **GAS FLOW CAPACITY STUDY**

Interconnector (UK) have completed a preliminary study, reviewing the potential to increase gas flow capacity from Zeebrugge to Bacton beyond the present level of 8.5 BCM/Y. Following this review and in response to market demand the I(UK) Board has given approval for engineering studies to continue and for the established process for seeking Shippers commitment to proceed. This process, which will take place over the next few months, invites all qualifying Shippers to support an enhancement of flow capacity into the UK.
